energy or sunlight

total reflectance.

 Solar Reflectance Index (SRI): The SRI is used to determine compliance with LEED requirements and is calculated according to

ASTM E 1980 using values for reflectance

and emissivity. To meet LEED requirements, a roofing material must have an SRI of 29 or greater for steep slope roofing and an SRI

value of 78 or higher

for low slope roofing.

For more information, visit **usgbc.org**.

from its surface. SR values are numbered 0 to 1.0. A value of 0 indicates that the surface absorbs all solar energy and a value of 1.0 indicates

States. please inquire). > Solar Reflectivity (SR): Solar reflectivity or reflectance is the measure of a material's ability to reflect solar

 A 40-year limited paint warranty is available for all colors upon written request. Please inquire. (Outside the
